ALCYONE

The sonic event!

Cabasse

ALCYONE

Miniature Spheres only

4 inches in diameter, the new Alcyone satellites feature all the acoustical qualities of any Cabasse system: efficiency, power handling, transparency and stability of the sound stage.

The Alcyone satellites are fitted with new wide bandwidth drivers designed according to the Cabasse SCS (Spatially Coherent System) principles.

Alcyone is also a star, more precisely a group of stars made of a main one surrounded by tiny satellites. It shines like no other, with 1400 times the power of the Sun. When astronomy meets sound Alcyone arises.

Integration, orientation, satisfaction

Alcyone satellites either can be placed on a shelf, mounted on the wall, or afixed atop the optional stands. The stand hides the speaker wire which is threaded through one of the stand's rod supports. The shelf or wall-mount base is magnetic, so the speaker can be oriented in any direction for ultimate flexibility in placement.

The Alcyone 5.1 system consists of one Santorin 17 subwoofer (7» woofer and 100 W amplifier), 5 satellites ready for bookshelf or on-wall use, and a complete set of interconnect cables.

Easy instant install and pleasure.

The Alcyone satellite has a new wide bandwidth high-efficiency driver for acoustic linearity, high output, and full spatial coherency, just like the rest of the Cabasse spherical line. It has been designed in the Cabasse Acoustic Center in France especially for the small spherical Alcyone enclosure.
